## European Tourism Sustainability Monitoring 2030

office@romontana.org

# About **ETSM2030**.

The European Tourism Sustainability Monitoring 2030 (**ETSM2030**) is a project funded by the European Union (EU) to foster sustainability certification and sustainability knowledge within SMTEs (*Small and Medium Tourism Enterprises*) as well as bring together sustainable working SMTEs in a network, where exchange is encouraged.

The ETSM2030 project is part of COSME, which is a European program to support competitiveness amongst SMTEs within the EU.

Implementation period: January 2023 – December 2025

Budget: 1,138,510.11 EUR

# Consortium from 6 countries: Austria, Italy, Germany, Romania, Poland and Slovenia

# Context

- **The European tourism industry was strongly affected by the COVID-19 crisis.**
- **At the same time, awareness and understanding of sustainability has been raised by the crisis, creating momentum to rebuild a more resilient tourism industry.**
- **Thus, the crisis needs to be used as an opportunity for the tourism industry in Europe to follow green and digital transition pathways.**

- **ETSM2030 aims at establishing a network of tourism SMEs (SMTes) to increase sustainability monitoring by co-creating and co-implementing Sustainable Innovations Projects (SIP) and by boosting participation in relevant sustainable certification schemes, in particular the [EU Ecolabel](#) and [EMAS \(Eco-Management and Audit Scheme\)](#).**

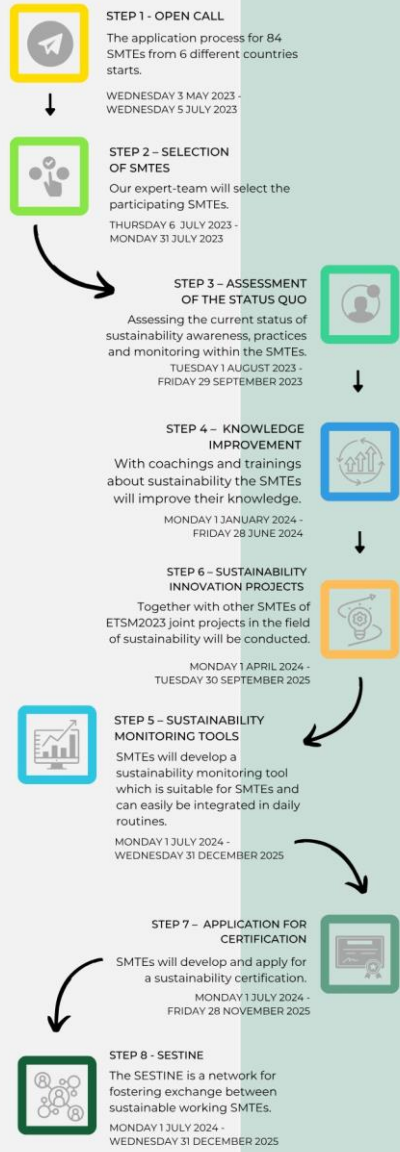

- **The ETSM2030 project team selected 84 SMTes (using very clear criteria) via an open call in six EU countries (Austria, Germany, Italy, Poland, Romania and Slovenia).**
- **The selected SMTes become participants to the program and are boosted in their sustainability performance (including financial compensation for the effort in the project activities).**

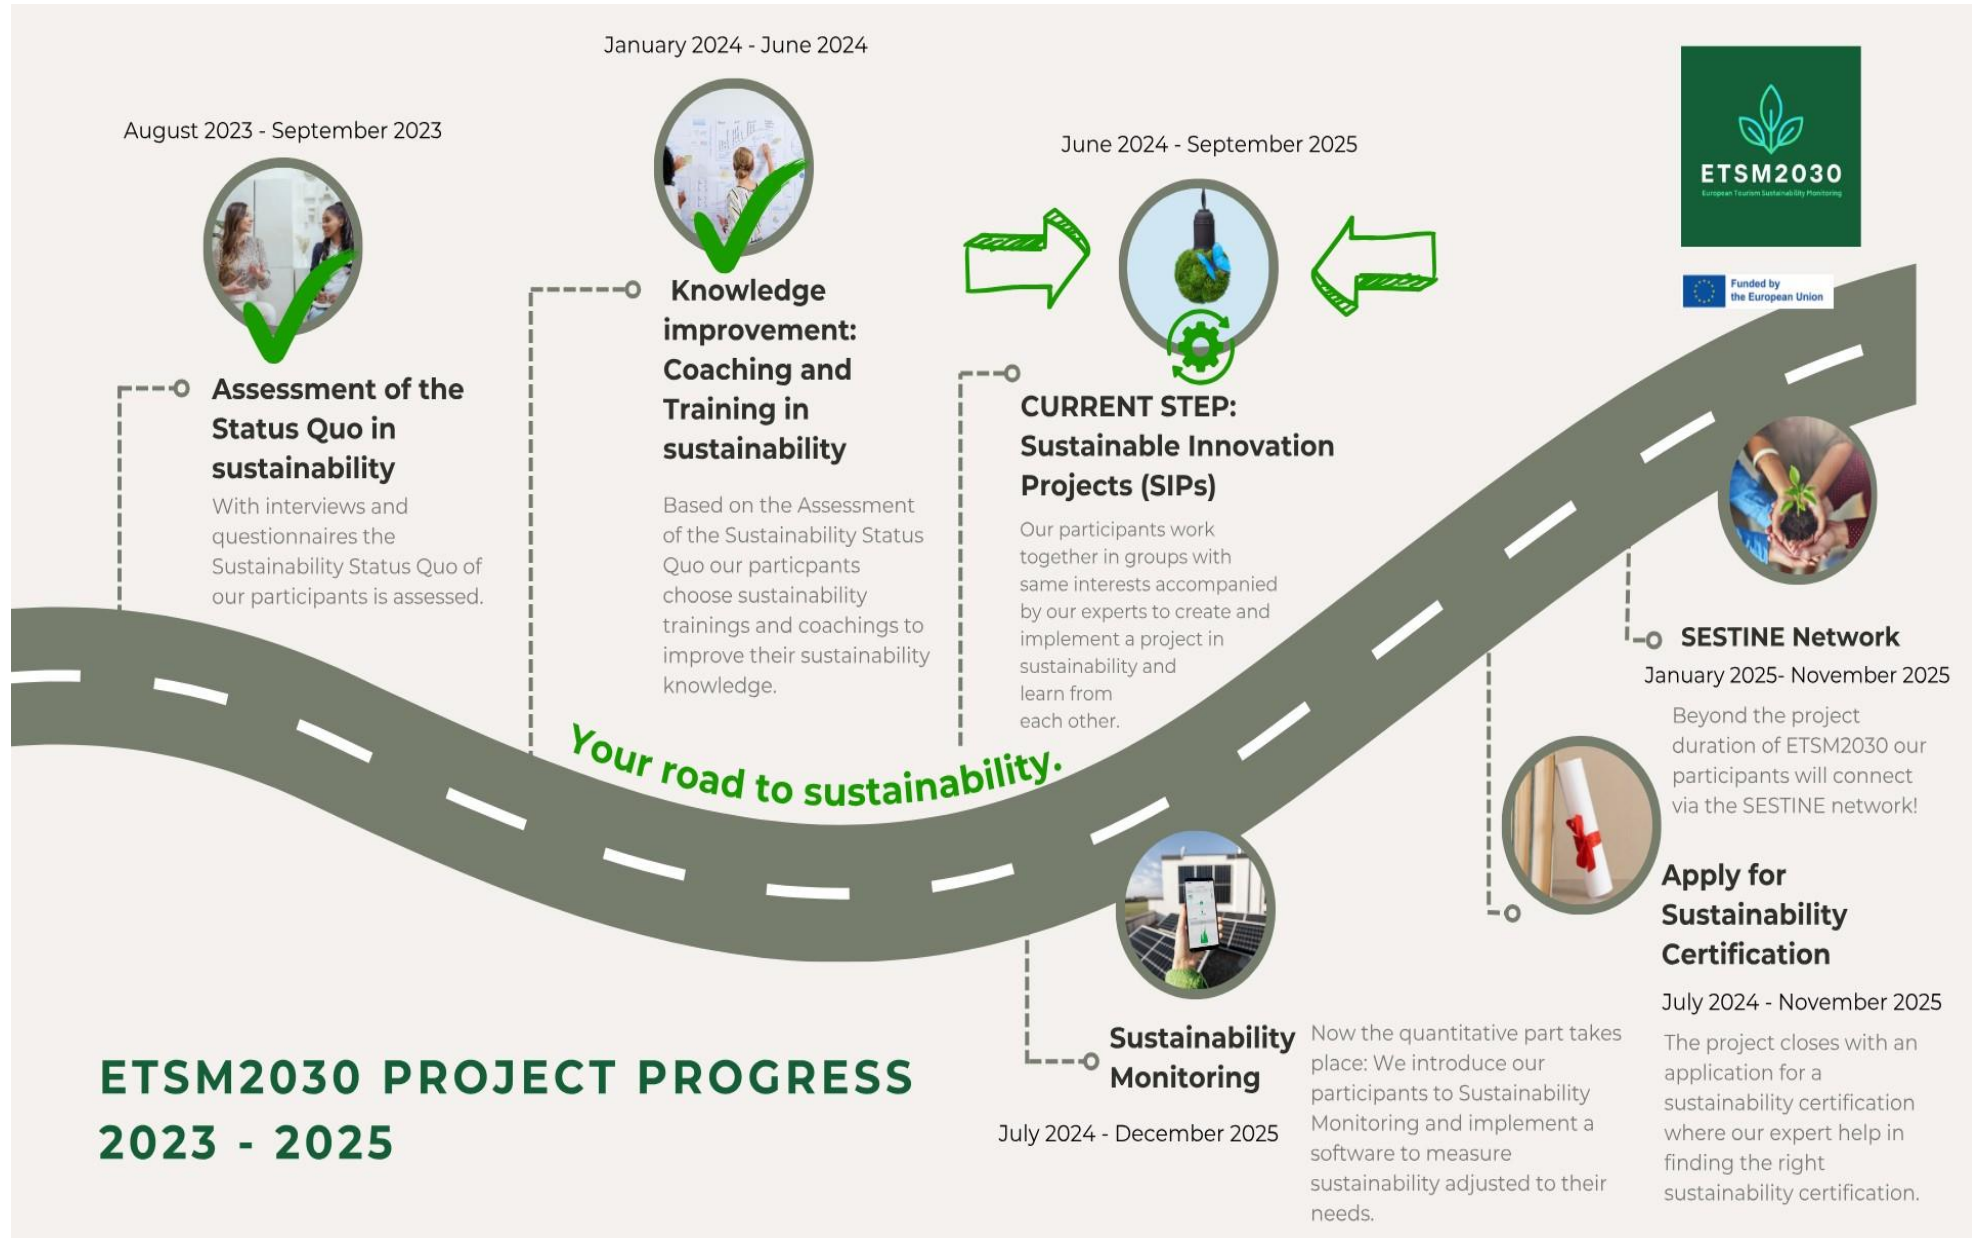

- **The 84 participating SMTEs receive specific trainings and coaching about sustainability, how to monitor it and to take advantage of a collaborative learning platform.**
- **Also, the SMTEs reveal potential for Sustainability Innovation Projects (SIPs).**
- **Due to this learning effects and cross-border exchange of the SMTEs they are encouraged to apply for established sustainability certification schemes (EU-standards) and be part of the SESTINE network (Sustainability European SMTE Innovation Network of Excellence).**

FINANCIAL SUPPORT

## Sustainability Innovation Projects (SIPs)

These projects apply the knowledge acquired in the coaching and training – SIPs are concrete implementations of sustainability actions in one or more thematic areas in which the SMTEs take part. The SMTEs will build tandems by jointly co-creating and co-implementing own cooperation projects together with at least one SMTE located in a partner country. The SIPs will be supervised and conducted by sustainability experts to ensure competent consultation.

## Sustainability European SMTE Innovation Network of Excellence (SESTINE)

The SESTINE is a digital collaboration and co-creation platform in the area of sustainability monitoring and innovation in tourism and a great chance to foster cross-border exchange.

It serves as a communication and dissemination tool for sustainability best practices in tourism and invites partners from all over Europe to participate. The SMTEs will be able to benchmark their sustainability performance in SESTINE to show their sustainability. The SESTINE aims to share knowledge among the ETSM2030 members and later within the whole European tourism industry.

Furthermore, outstanding best practice examples will be honored with a newly introduced SMTE sustainability award.

# What are the benefits for the ETSM2030 project participants?

- evaluate the sustainability status quo within the SMTEs
- gain knowledge in sustainability monitoring
- participate in tailored workshops by experts
- show their sustainability to your stakeholders
- network with other SMTEs in their field
- plan & implement sustainability innovation projects
- exchange with other SMTEs
- sustainability certification implemented
- financial compensation for their efforts

# Why sustainability certification?

- Becoming a certified sustainable business does not mean to only get a stamp of approval but ensure that your company operates environmentally friendly.
- A sustainable certification typically involves a business owner investing in a program that lays out a handful of green initiatives to be completed or added to a project launch.
- Focusing on going green can save money, increase the customer base and provide talking points for the tourism business.

## **There are several certifications of sustainability. Which one should a tourism company take part in?**

Being part of the EU economy – the two following EU sustainability labels definitely are recognised and also are appreciated by a wide range of consumers as well as business partners. A certification in the following EU sustainability certifications proves the sustainability efforts & success and helps to show the sustainability to others.

Advantages of the following possibilities of EU sustainability certifications are in a nutshell:

- Provide consumers with trusted sustainable products
- Play a role in shaping more sustainable consumption habits
- Be one step ahead of future advertising rules
- Certify your green offer
- Make the reporting on your sustainability efforts easy

# EU ECOLABEL

We help you through the jungle of sustainability certificates

Certifying Institution:  
**European Commission** with different partner per country

European scope

non-food products and services can be certified

88.921 products and services are certified with the EU-Ecolabel (2023)

verification procedure: on-site third-party verification every 3-5 years

type of sustainability: **environmental**

[www.etsm2030.eu](http://www.etsm2030.eu)

Besides these two certifications established by the EU also other certifications exist - on EU level, international or on a national or regional level, as the following examples show:

## 1 - Understand the Benefits of Sustainability Certifications

Take a look at our latest post for the benefits of sustainability certification!

## 2 - Get to Know the key components of sustainability certifications

Consider the key characteristics:

- **transparency** and **credibility** of the certification body,
- elements of **sustainability assessment and requirements**,
- **third-party verification** and **auditing processes**,
- **scope** and **relevance** to your industry as well as
- the **international recognition**.

## 3 - Identify your sustainability objectives and priorities

Identify the **environmental, social and economic aspects** that are most relevant for your business and align your business with the most suitable sustainability certification.

[www.etsm2030.eu](http://www.etsm2030.eu)

## 4 - Evaluate applicability and suitability for your business

In this step the evaluation of specific requirement and focus of the areas of each sustainability standard take the centre stage.

## 5 - Engage your Stakeholders

Expectations and demands of your stakeholders, including your customers, investors and employees have an massive impact on the choice of your sustainability certification. Engage them in the process!

## 6 - Make a choice!

Following the above listed steps you can ensure a well-informed decision about the right sustainability certification for your business!

In the following posts we present to you different sustainability certificates - stay tuned!
